ⓘ **How to use this manual:** Each dashboard option is explained in terms of what it does and why it matters — this manual intentionally does not describe internal database structures, table names, or technical field layouts, which remain confidential to ITDESK SOLUTIONS LLP.

1 Introduction to the Platform

1.1 Objective of the Software

BNP Cafe Networking Platform is a structured, chapter-based business networking and referral system built to help entrepreneurs, professionals and business owners connect, generate quality referrals, and grow through a trust-first community — delivered as a complete web platform with dedicated portals for administrators, paying members, and prospective guests.

The platform is organised around **local chapters (pincodes)**, so that networking activity stays relevant to a member's own city or locality while still allowing the wider community — across every chapter in India — to be reached through events, the online directory, and the referral network. The objective of the software is to digitise and streamline every stage of this networking journey: discovering the community, joining a membership plan, applying and paying online, attending curated events, exchanging referrals through a searchable member directory, and receiving support — all without manual paperwork.

For the Organisation

Gives the management team a single control centre to launch new chapters, manage membership plans and pricing, publish events and content, and monitor the health of every chapter from one dashboard.

For Members & Guests

Gives entrepreneurs an easy way to discover the community, apply for membership, pay securely online, register for events, find fellow members for referrals, and get support — all from a personal dashboard.

1.2 Overall Functionality at a Glance

The platform is built around six functional pillars that work together as one system:

- **Public Website** — a marketing and information site covering the home page, About Us, membership plans, upcoming events, blog articles, member testimonials, and a contact form for enquiries.
- **Membership Engine** — plan selection, an online application form (address, identity and business details, introducer/partner details, terms acceptance), secure online payment, and automatic activation.
- **Events Engine** — creation and publishing of chapter events, online registration for both free and paid events, payment collection for paid events, attendance marking, and post-event feedback collection.
- **Referral Directory** — a searchable directory of active members (by name, business name, category, and city) that active, paying members can use to find one another for referrals — protected from bulk harvesting.
- **Support Desk** — a ticketing system for members and guests to raise queries, with a parallel escalation channel that lets Sub Admins raise issues directly to the Super Admin.
- **Multi-Tier Administration** — a role-based back office (Super Admin and Sub Admin) with chapter-wise (pincode-wise) data scoping, payment gateway configuration, and site-wide settings.

✻ **In short:** BNP Cafe Networking Platform takes a real-world, chapter-based business networking community and gives it a complete digital backbone — from the first website visit, to becoming a paying member, to everyday use of the directory, events and support desk.

The BNP Cafe public website — the first thing a prospective member or guest sees.

ⓘ **A real community, now on a real platform:** BNPCAFE began in 2015 as informal business-owner get-togethers in Mumbai, Navi Mumbai and Thane, later expanding to Jaipur, Ahmedabad, Udaipur, Jodhpur, Vadodara and Bengaluru, with 1,000+ meetings held between 2015 and 2020. The community stayed connected online through COVID, and relaunched in April 2026 as **BNPCAFE 2.0** — this platform is the digital home for that relaunch.

2 Understanding the User Roles

The platform recognises four distinct roles, each with its own dashboard and permissions. The table below gives a quick comparison before the detailed, option-by-option walkthrough in the sections that follow.

ROLE	WHO THEY ARE	WHAT THEIR DASHBOARD IS FOR
Super Admin	The platform owner / head-office administrator.	Full, unrestricted control of every chapter, member, plan, event, payment gateway and system setting across the entire platform.
Sub Admin	A chapter-level administrator assigned to one or more specific pincodes.	Day-to-day management of members, events, content and support for their own assigned chapter(s) only.
Member	A business owner or professional with an active, paid membership.	Manage their own profile, view invoices, search the member directory, register for events, and raise support tickets.
Guest	A visitor who registered for an event or submitted a contact enquiry, but has not yet purchased a membership.	A lighter version of the member dashboard used to track their own enquiries/event registrations and to eventually upgrade to full membership.

ⓘ **Note on Guests:** A Guest is never asked to fill a separate "sign-up" form. The moment someone registers for an event or submits an enquiry on the public website, the platform recognises them by their email address and automatically gives them their own dashboard — without a password — so they can track their activity immediately. They become a full Member the moment they purchase a membership plan (or when a Super Admin promotes them manually).

3 Super Admin Dashboard

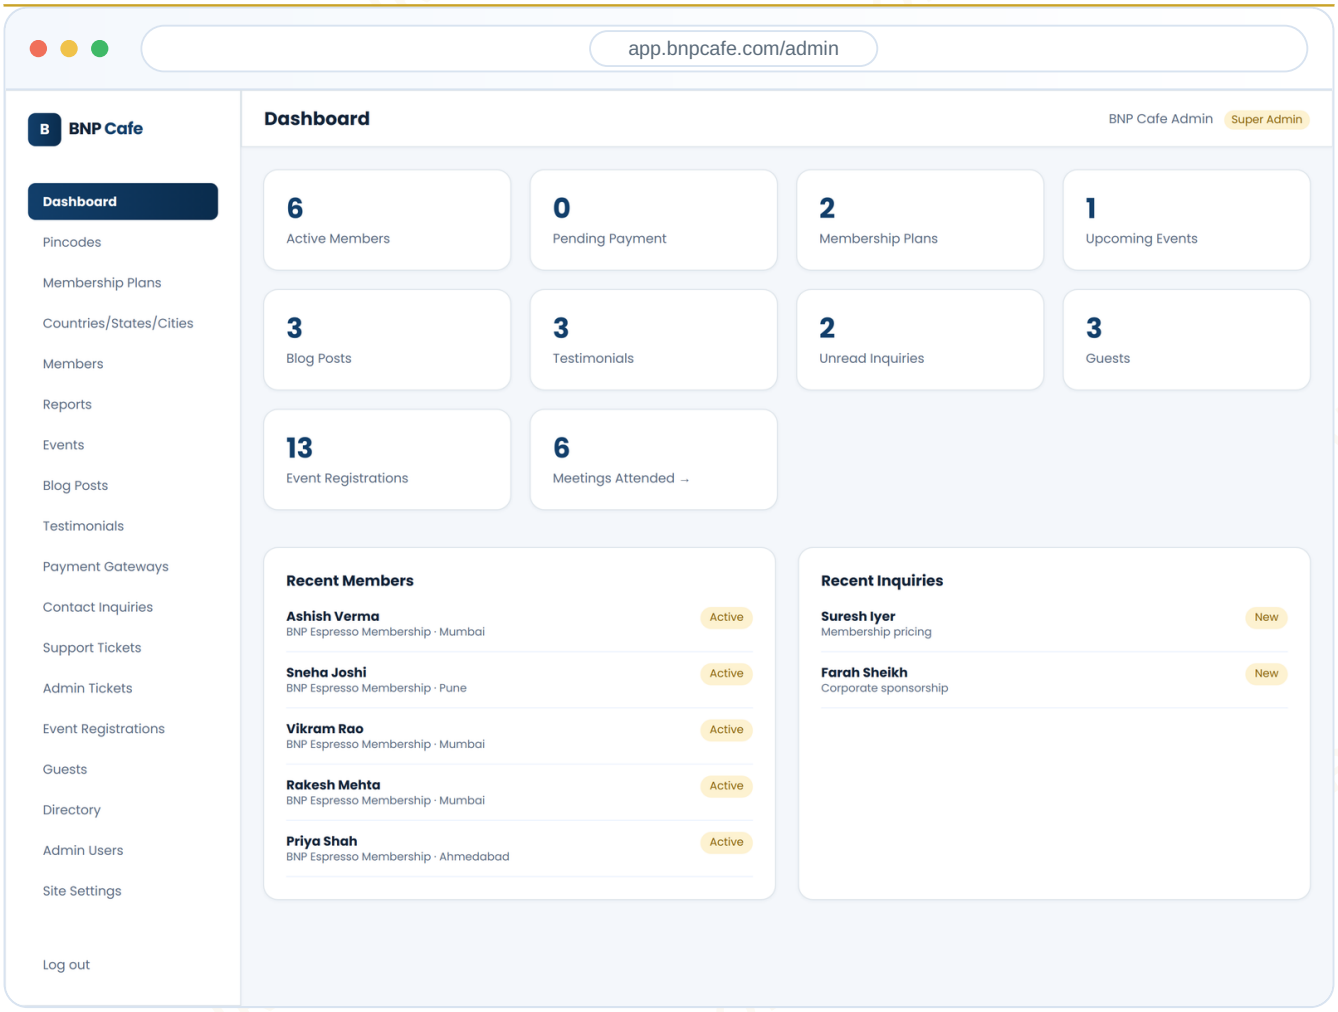

The Super Admin has complete, unrestricted visibility and control over the entire platform — every chapter, every member, every setting. The Super Admin's side navigation contains every option described below.

3.1 Dashboard Overview

The landing screen after login. It gives the Super Admin an instant, platform-wide health check without opening any other menu:

- **Active Members** — total currently active
- **Pending Payments** — applications awaiting payment
- **Membership Plans** — total plans configured
- **Upcoming Events** — events not yet held
- **Blog Posts** — published articles
- **Testimonials** — total collected
- **Unread Inquiries** — contact form messages awaiting a reply
- **Guests** — non-paying registered visitors
- **Event Registrations** — total across all events
- **Meetings Attended** — total confirmed event attendance, links straight to the Reports screen

Below the summary tiles, the dashboard also lists the five most recently joined members and the five most recent contact enquiries, so the Super Admin can act on fresh activity without navigating away.

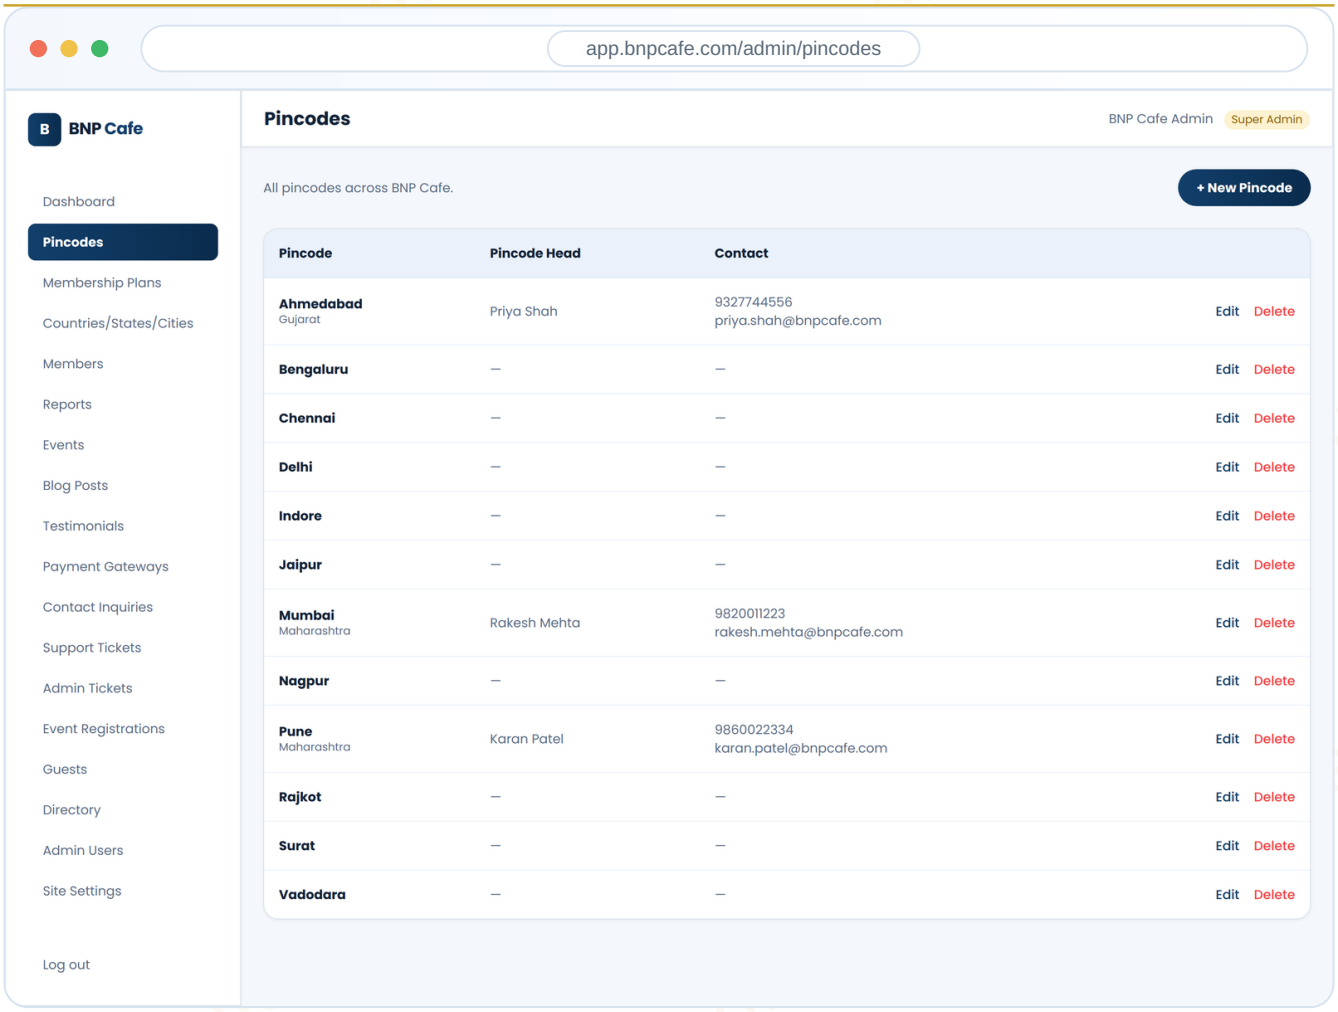

Super Admin — Dashboard Overview, with the new "Meetings Attended" tile.

3.2 Pincode / Chapter Management

Pincodes

SUPER ADMIN ONLY

This is where new chapters are opened and existing ones are maintained. Each pincode/chapter record carries the chapter's identity — its name, state, chapter head's name, phone, email, postal address and an "about the chapter" description — which is used to represent that chapter on the public website and to scope Sub Admin access. Only the Super Admin can permanently remove a chapter.

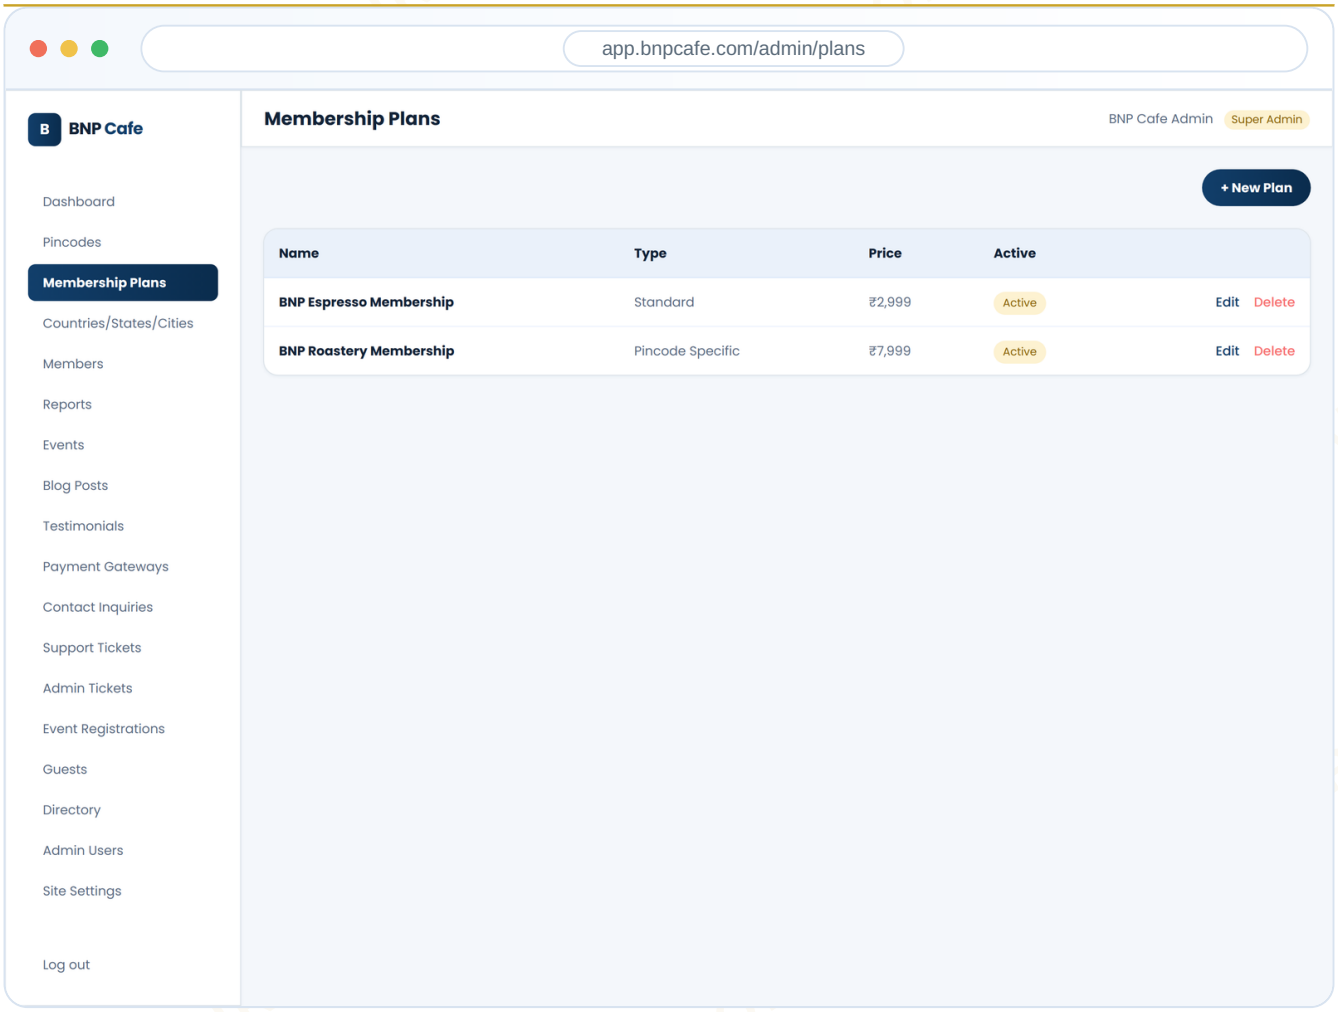

Super Admin — Pincode / Chapter Management.

3.3 Membership Plans

Membership Plans SUPER ADMIN ONLY

Full control over every plan offered to prospective members: plan name, tagline, plan type (a standard nationwide plan, or a city-specific plan tied to one chapter), price and price note, validity period, the list of features/benefits displayed to the public, and whether the plan is active and visible on the public membership page. Plans can be reordered, edited, or removed at any time.

Super Admin — Membership Plans.

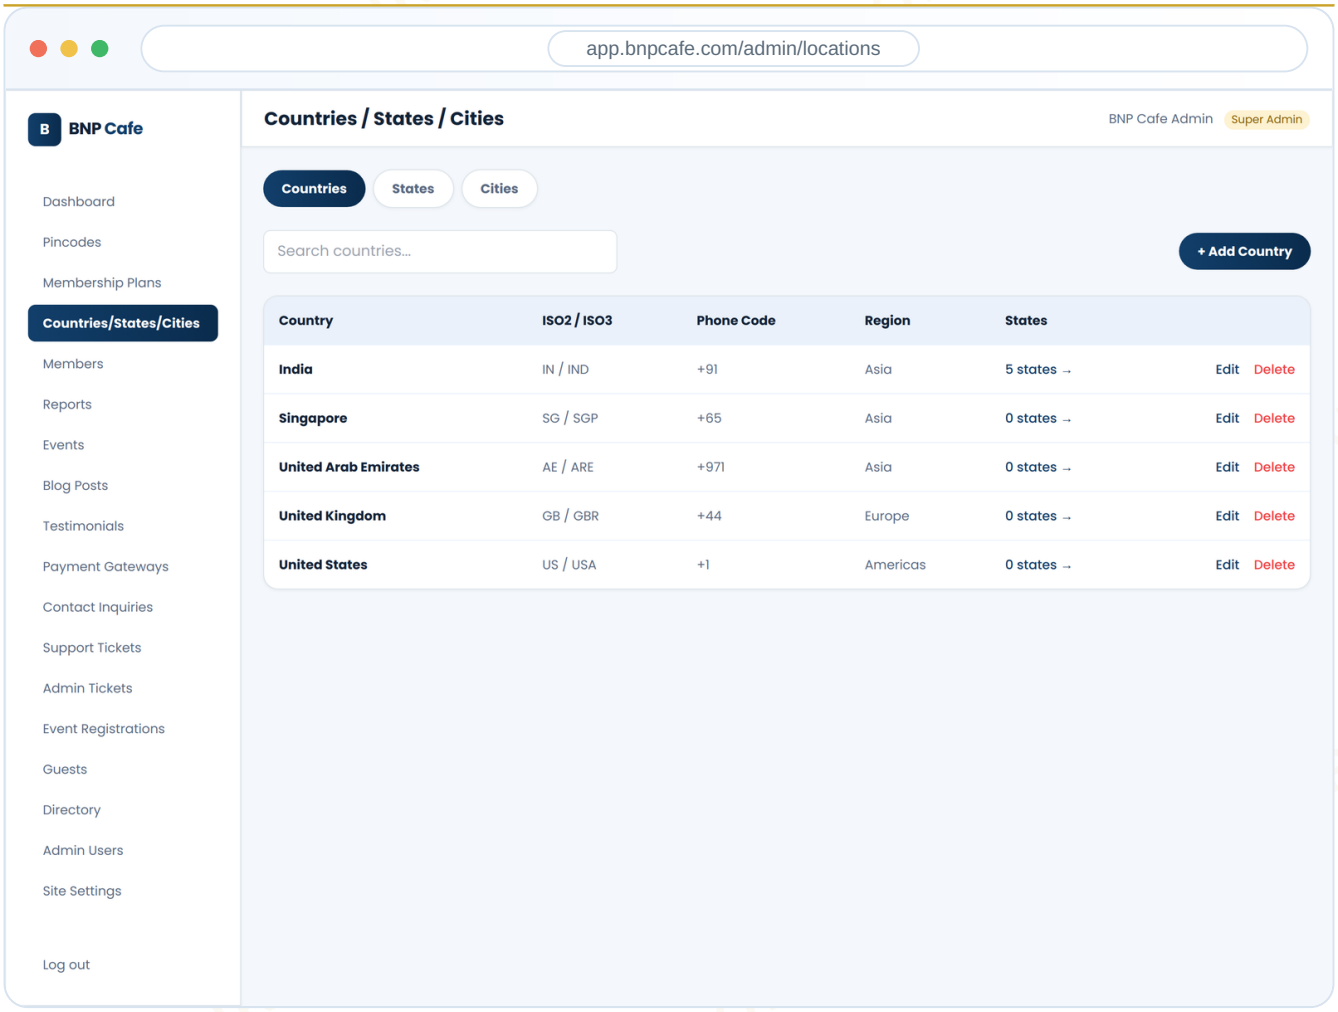

3.4 Countries / States / Cities

Location Master Data

SUPER ADMIN ONLY

Maintains the master list of countries, states and cities used throughout the platform's address dropdowns — for example on the membership application form and a member's business address. This is separate from the chapter/pincode list and keeps address entry consistent and error-free across the entire platform.

This screen is now a single, tabbed **Locations hub** — Countries, States and Cities each get their own tab, and each tab has its own search box that looks across every country or state at once, rather than requiring the Super Admin to drill into one country to search its states. Countries can still be added directly from here; a new state or city is added from inside its parent country or state, keeping the hierarchy tidy.

Super Admin — the new Countries / States / Cities hub (Countries tab shown).

3.5 Members Management

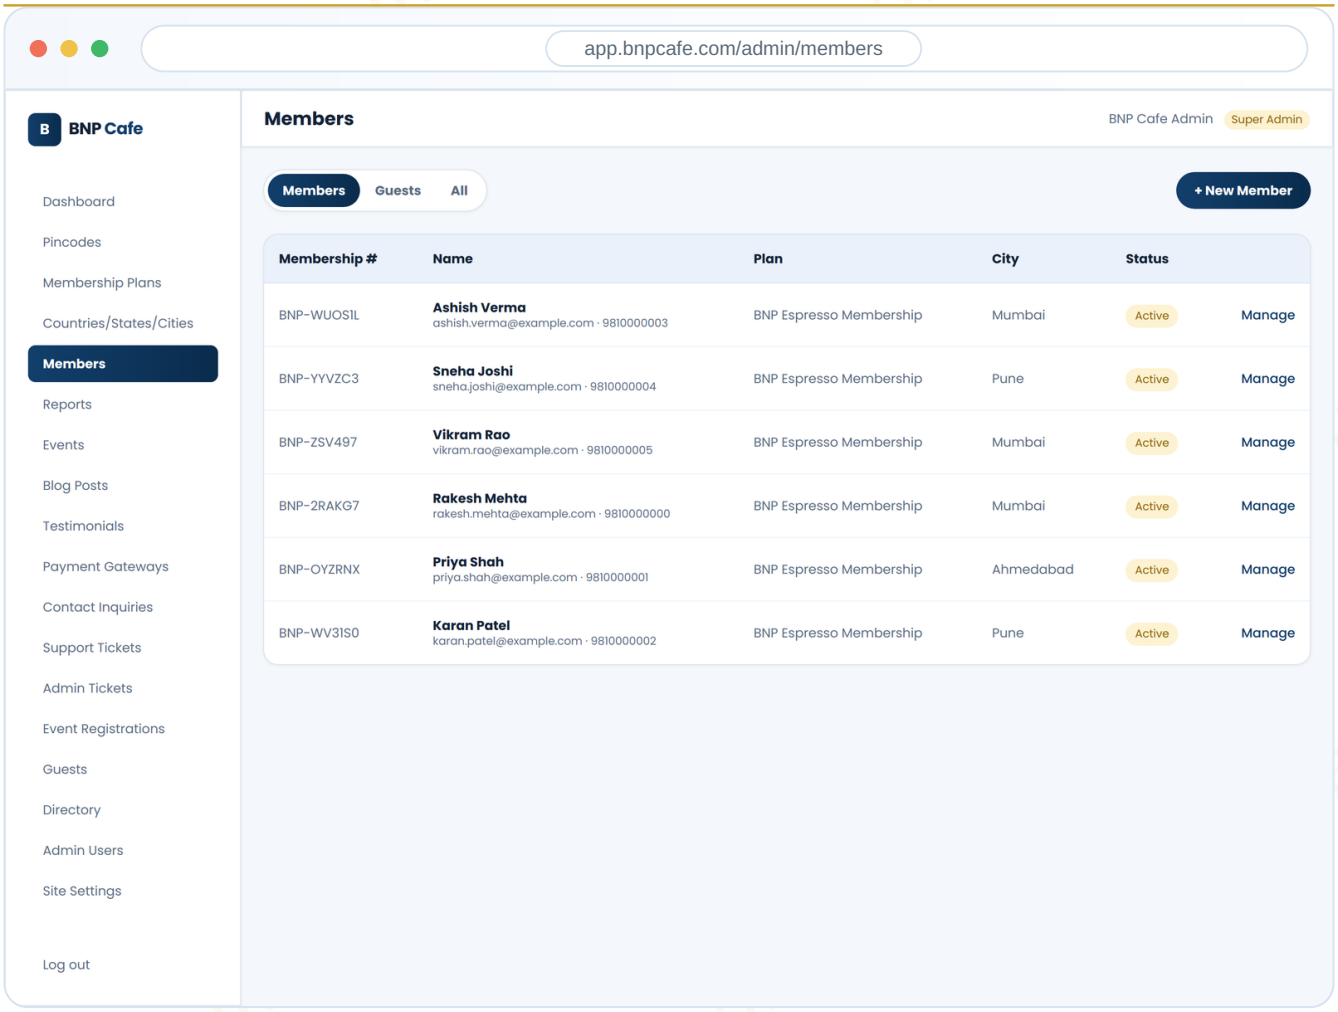

Members

VIEWABLE BY BOTH ROLES

A complete, searchable listing of every member and guest on the platform (Sub Admins see only their assigned chapters). The Super Admin can additionally:

- **Add a member directly** — create a member account manually, set their plan and status, and optionally auto-generate a secure password to share with them.
- **Edit any member** — update contact details, business information, assigned chapter, plan, membership status and expiry date, and reset a password.
- **Promote a Guest to a full Member** — a one-click action that converts a guest record into a full member once they are ready to be onboarded formally.

Behind the scenes, the platform now also recognises a returning person by phone number as well as email before creating a new guest or member record — so the same real person submitting an enquiry with one email and registering for an event with a different one doesn't end up as two separate, duplicate records.

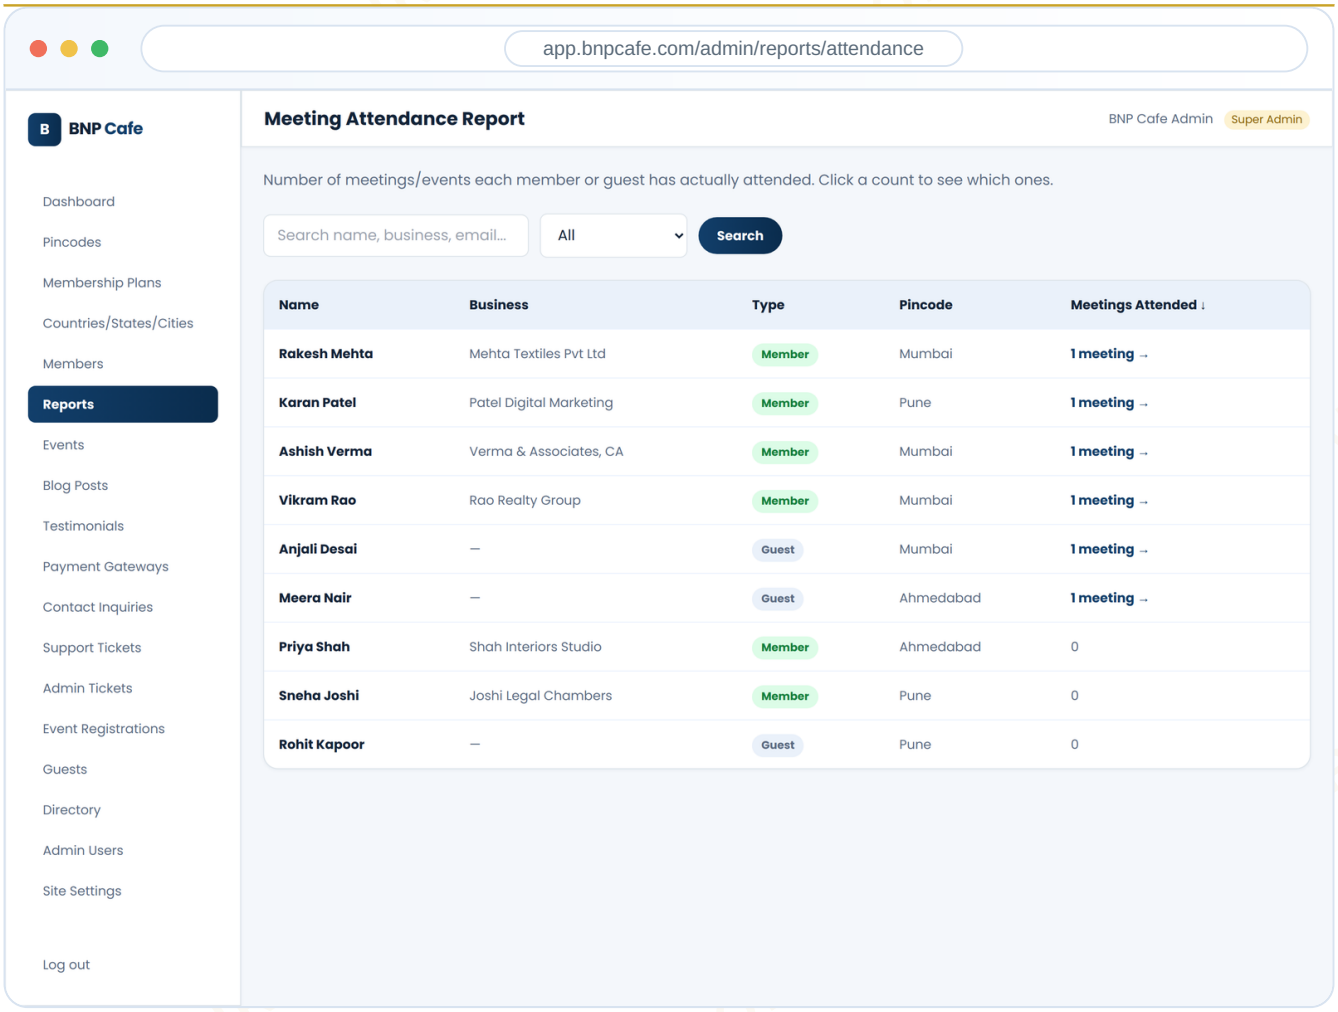

Super Admin — Members.

3.6 Reports

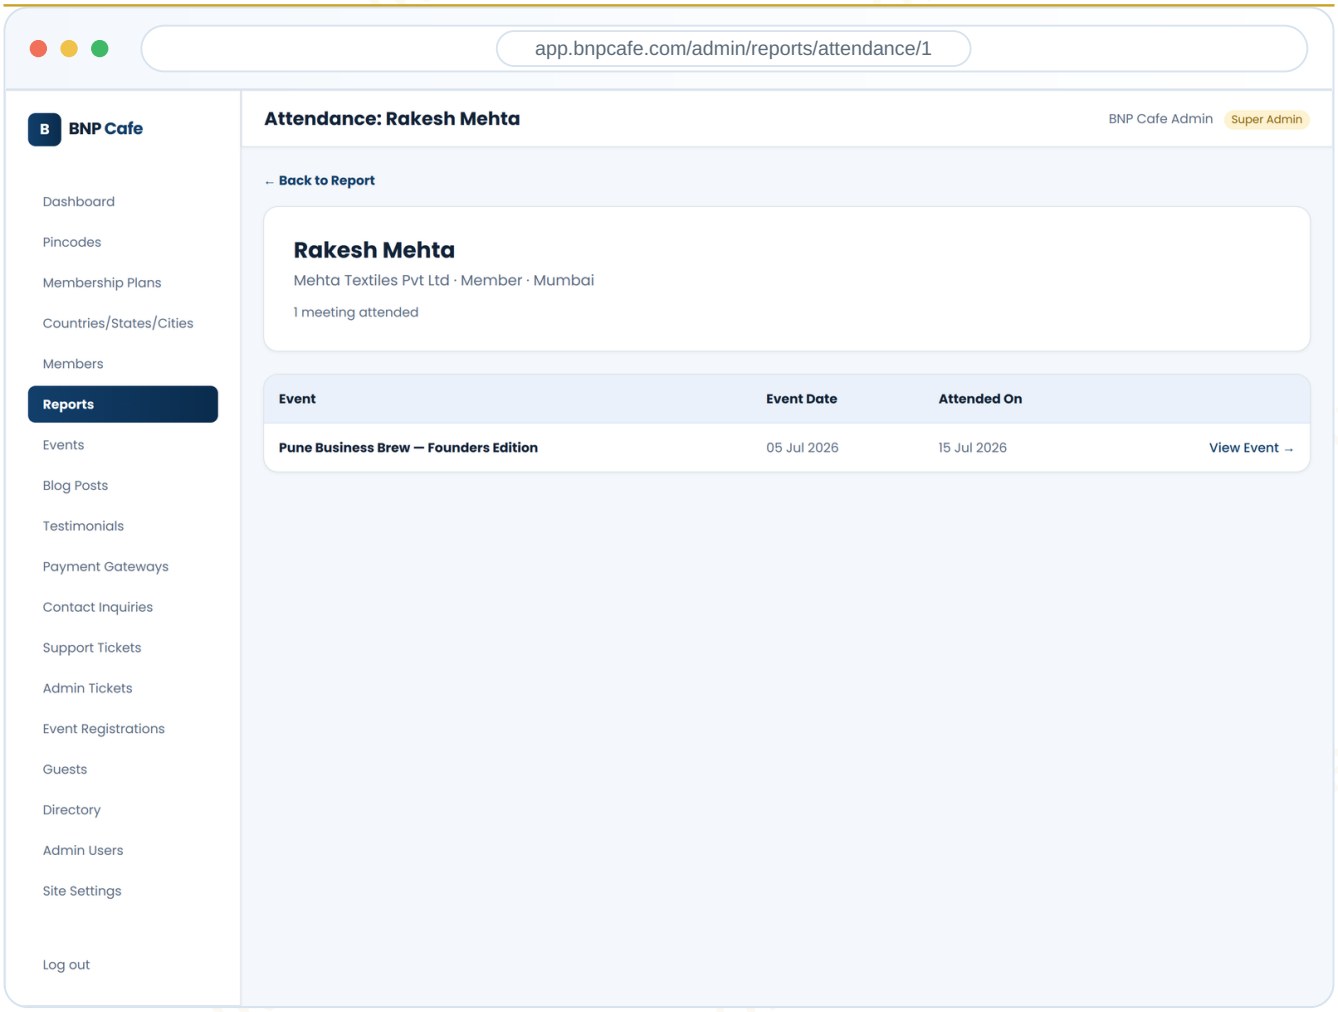

Meeting Attendance Report

BOTH ROLES, CHAPTER-SCOPED FOR SUB ADMIN

A new report that shows, for every member and guest, how many meetings/events they have **actually attended** — not simply registered for. It can be filtered to members only or guests only, searched by name, business or email, and sorted by name or by attendance count. Clicking a person's attendance count drills down into exactly which meetings they attended and when, with a direct link back to that event's registration list. The "Meetings Attended" tile on the main Dashboard links straight into this report.

Super Admin — Reports: Meeting Attendance (list view).

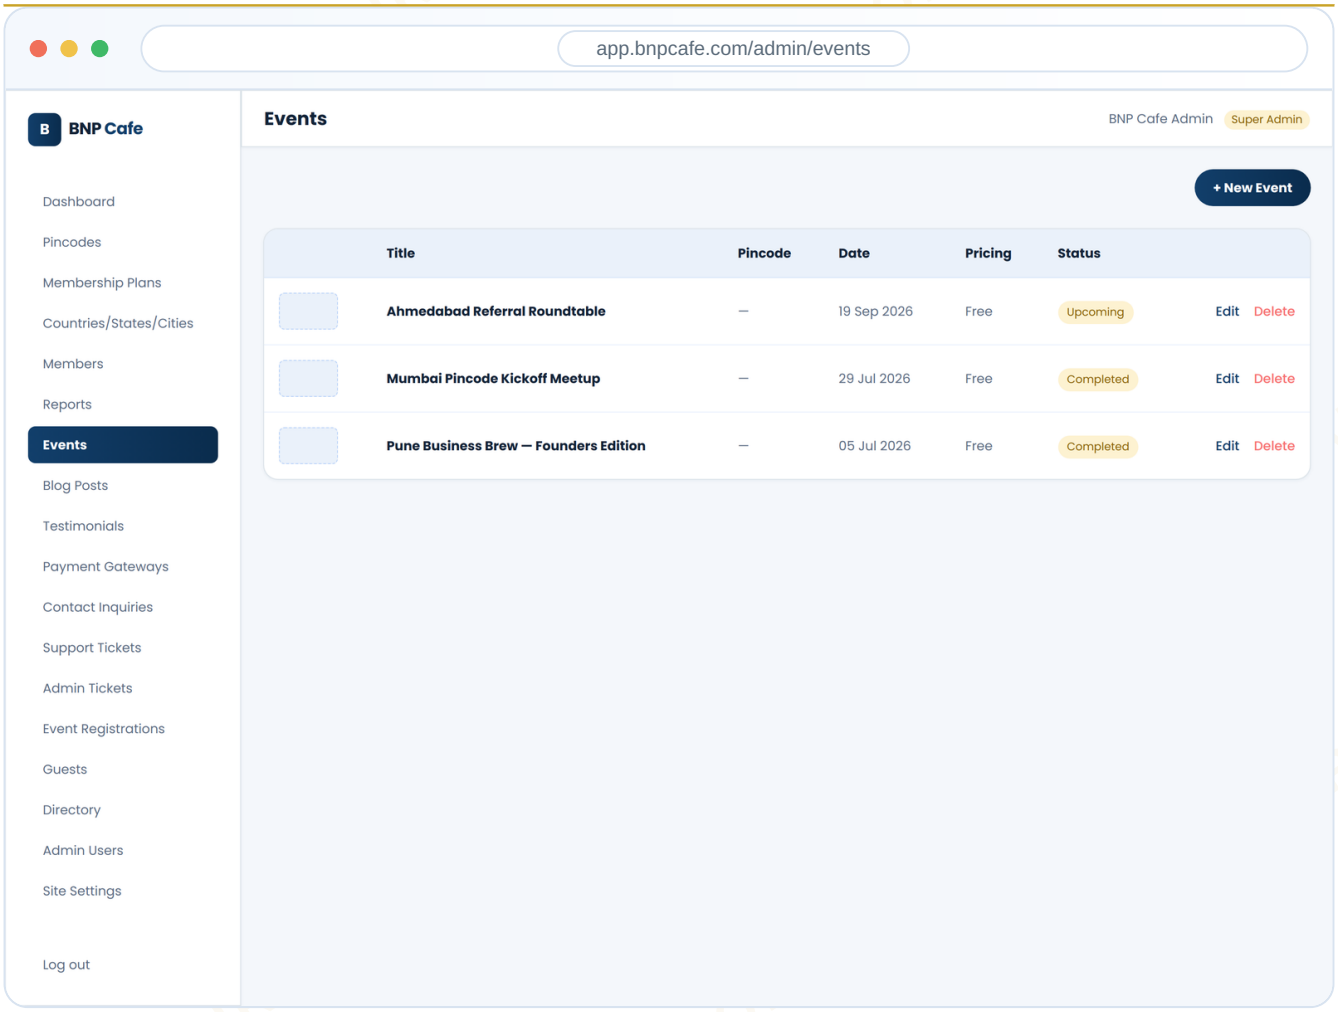

Super Admin — Reports: drill-down into one member's attended meetings.

3.7 Events Management

Events BOTH ROLES

Create and publish chapter events — meetings, workshops, networking meets — including whether the event is free or paid, its pricing, schedule and details. From the Event Registrations screens, the Super Admin can mark individual attendees as "attended," mark an entire event's registrants as attended in one action, and review the feedback submitted by attendees after the event.

Super Admin — Events.

3.8 Blog Posts

Blog BOTH ROLES

A simple content management area for publishing articles and community updates that appear on the public website's blog section — used for thought-leadership content, success stories and announcements.

3.9 Testimonials

Testimonials ADD/DELETE: SUPER ADMIN ONLY

Member success stories and quotes displayed on the public website. Both roles can view and edit existing testimonials; only the Super Admin can add a brand-new testimonial or permanently delete one.

3.10 Payment Gateways

Payment Gateways SUPER ADMIN ONLY

Configuration screen for the payment providers used to collect membership fees and event fees online. The Super Admin can activate or deactivate a gateway, switch it between live and test mode, set its display order, and securely store its connection credentials.

3.11 Contact Inquiries

Contact Inquiries BOTH ROLES, CHAPTER-SCOPED FOR SUB ADMIN

Every message submitted through the public "Contact Us" form lands here, allowing the team to review and follow up on prospective member enquiries.

3.12 Support Tickets & Admin Tickets

Support Tickets BOTH ROLES, CHAPTER-SCOPED FOR SUB ADMIN

Every support ticket raised by a Member or Guest appears here. The Super Admin can open any ticket, reply to it, and change its status (open, answered, or closed).

Admin Tickets SUPER ADMIN SEES ALL ESCALATIONS

A separate inbox for tickets that a Sub Admin has escalated upward for the Super Admin's attention. The Super Admin sees escalations raised by every Sub Admin across every chapter, while a Sub Admin only ever sees the ones they personally raised.

3.13 Event Registrations

Event Registrations BOTH ROLES SEE ALL CHAPTERS

A consolidated list of everyone who has registered for any event, regardless of chapter — used to track headcounts, payment status for paid events, and attendance.

3.14 Guests

Guests BOTH ROLES, CHAPTER-SCOPED FOR SUB ADMIN

A dedicated listing of everyone recorded as a Guest (registered interest, but not yet a paying member), along with a detail view showing that guest's event registrations and any enquiries they have submitted — useful for follow-up and conversion into full membership.

3.15 Directory

Directory BOTH ROLES

The administrator's view of the same searchable member directory that active members use, giving the admin team visibility into the referral network.

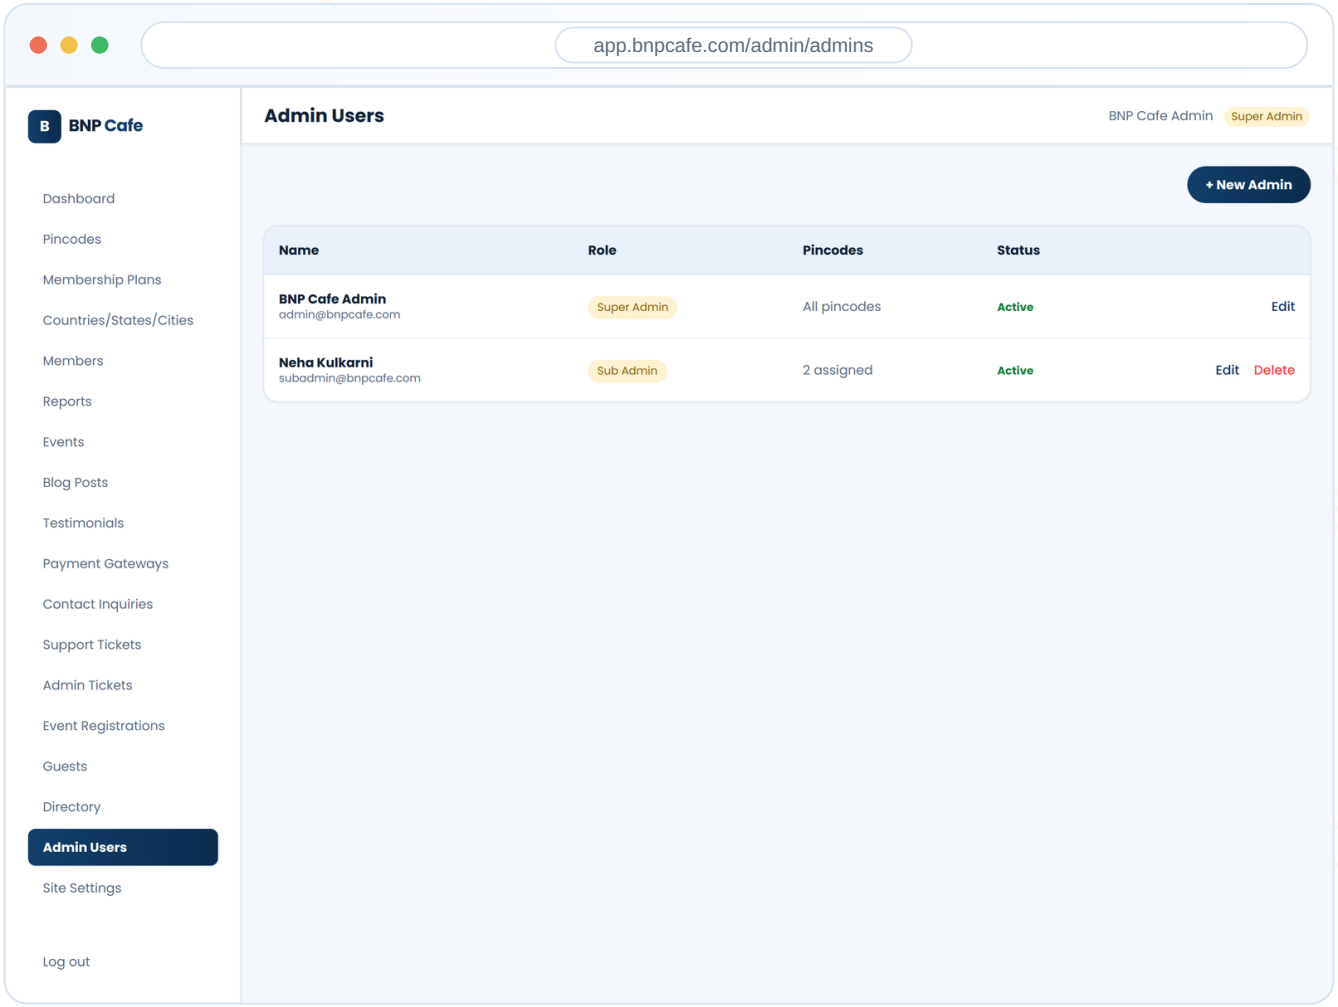

3.16 Admin Users

Admin Users SUPER ADMIN ONLY

The control centre for the administration team itself. The Super Admin can:

- **Create a new admin account**, choosing whether it is a Super Admin or a Sub Admin.

- **Assign chapters (pincodes)** that a Sub Admin is responsible for — a Sub Admin can be assigned to one or several chapters.
- **Activate or deactivate** an admin account, and reset its password.
- **Remove an admin account** (an admin cannot remove their own account, as a safety measure).

Super Admin — Admin Users.

3.17 Site Settings

Site Settings SUPER ADMIN ONLY

System-wide configuration for the entire platform, grouped into four areas:

Site Logo New

Upload a custom logo (PNG, JPG, SVG or WEBP) to replace the default "B" mark shown in both the admin sidebar and the public website header — with a one-click option to remove it and revert to the default mark.

General & Branding

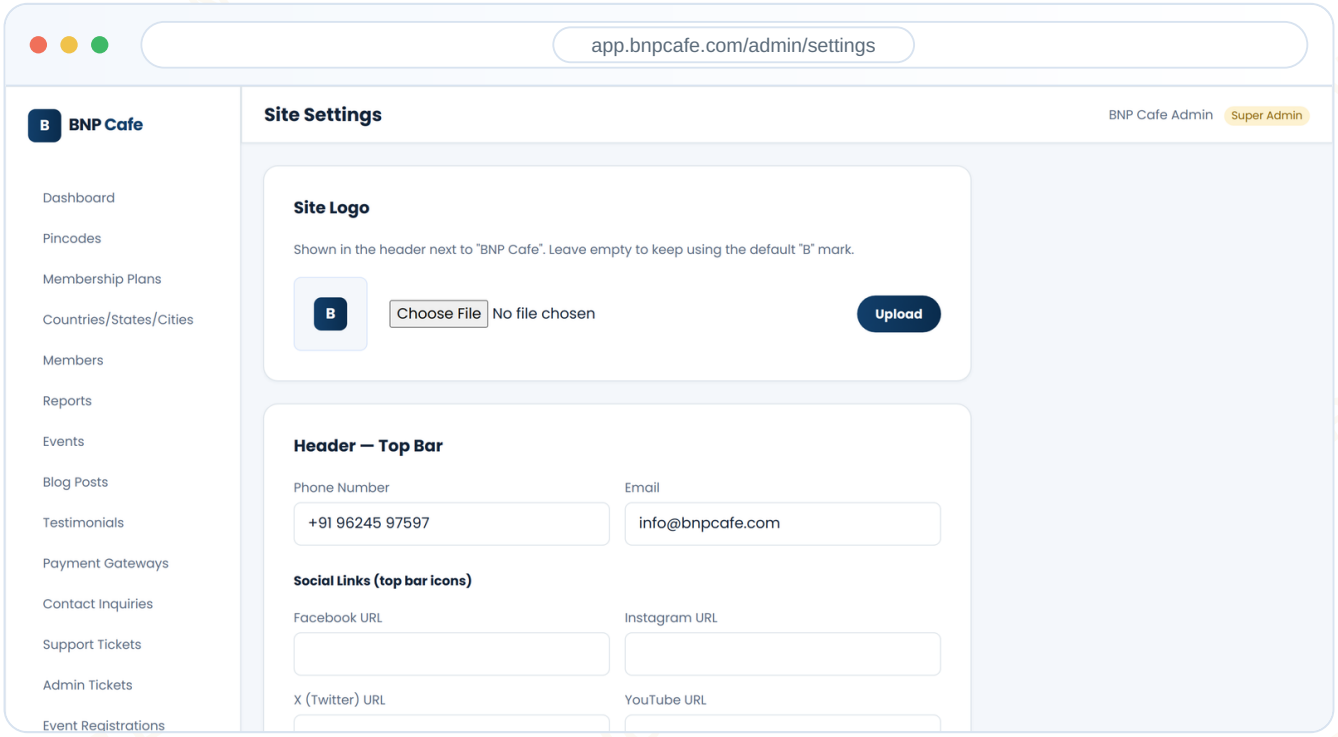

Public contact phone and email, social media links (Facebook, Instagram, X, YouTube, LinkedIn), WhatsApp and Telegram channel links, and the footer branding text shown across the public website.

Platform Limits

Business rules such as how many directory results are shown per search, how many paid events a guest may join before upgrading, and the maximum number of open support tickets a member or guest may have at once.

Email (SMTP) Configuration

The outgoing mail settings used to send system emails, with a built-in "Send Test Email" option to confirm the configuration is working correctly before relying on it.

Super Admin — Site Settings, showing the new Site Logo upload panel.

4 Sub Admin Dashboard

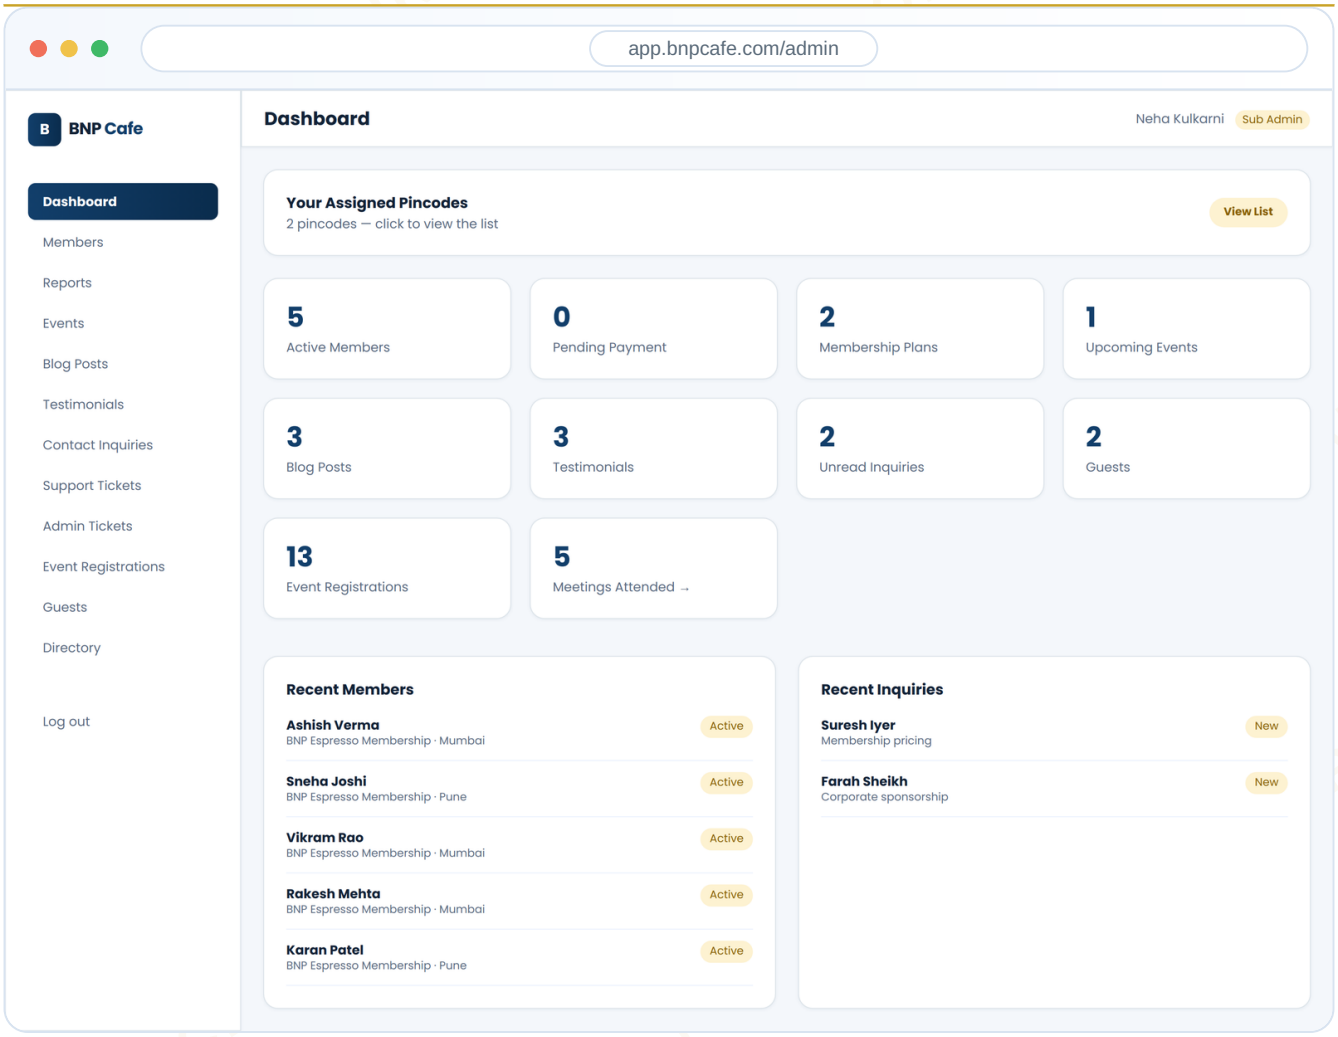

A Sub Admin is a chapter-level administrator, assigned by the Super Admin to manage one or more specific pincodes/chapters. The Sub Admin uses the same visual dashboard as the Super Admin, but with a shorter menu and every screen automatically filtered to their own assigned chapter(s) only.

4.1 What a Sub Admin Can Do

- **Dashboard** — the same overview tiles as the Super Admin, but every number (members, pending payments, guests, inquiries, recent activity) reflects only their own assigned chapter(s).
- **Members** — view members and guests within their assigned chapters.
- **Reports** — the same Meeting Attendance Report as the Super Admin, scoped to their own chapter's members and guests.
- **Events** — create and manage events for their chapter, and mark attendance for their event registrations.
- **Blog Posts** — create and publish articles.
- **Testimonials** — view all testimonials and edit the ones belonging to their own chapter (cannot add new ones or delete existing ones).
- **Contact Inquiries** — view and respond to enquiries from their own chapter.
- **Support Tickets** — view and reply to member/guest tickets from their own chapter.
- **Admin Tickets** — raise an escalation ticket directly to the Super Admin when an issue needs head-office attention, and track the tickets they have personally raised.
- **Event Registrations** — visible platform-wide (not chapter-restricted), so a Sub Admin can see turnout across all chapters for planning purposes.
- **Guests** — view guest records, their event registrations and enquiries, within their own chapter.
- **Directory** — the same member directory view available to the Super Admin.

4.2 Pincode-Based Access Scope

Every screen a Sub Admin opens is automatically filtered to only the chapter(s) assigned to them by the Super Admin. This means two Sub Admins looking at the "Members" screen at the same time will see two different lists — each scoped strictly to their own territory — while the Super Admin always sees everything.

Sub Admin — Dashboard, scoped to this Sub Admin's assigned chapters, with a shorter sidebar than the Super Admin's.

✲ **Self-service chapter creation:** If a Sub Admin creates a brand-new pincode/chapter themselves (where permitted), they are automatically assigned to manage it — so their own new chapter is never left orphaned outside their access.

4.3 Restricted Areas (Super Admin Only)

To keep chapter-level administration safe and consistent, the following remain exclusively with the Super Admin and do not appear in a Sub Admin's menu at all:

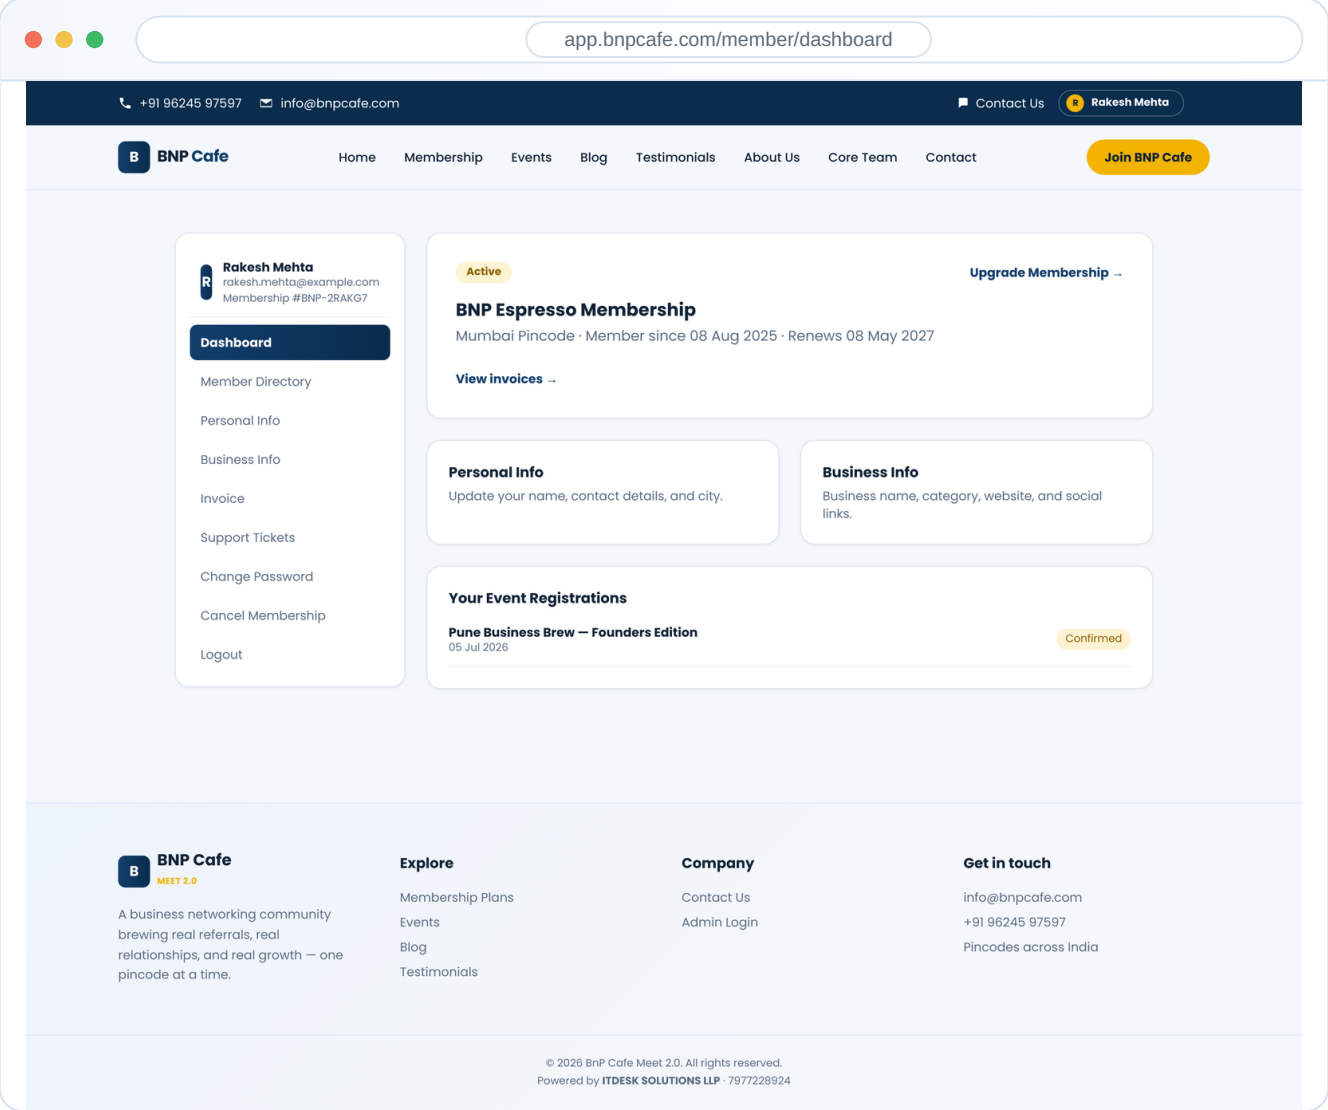

- Membership Plans (pricing and features)
- Countries / States / Cities master data
- Payment Gateway configuration
- Admin Users (creating or managing other admin accounts)
- Site Settings (branding, platform limits, SMTP/email configuration)
- Adding, editing or promoting Members directly, and deleting a chapter/pincode
- Adding or deleting Testimonials

5 Member Dashboard

Once someone becomes a paying Member, they get their own personal dashboard, accessible after signing in. The member sidebar contains the following options.

5.1 Dashboard

The member's home screen — a quick snapshot of their own account: current membership plan and status, chapter, and their five most recent event registrations.

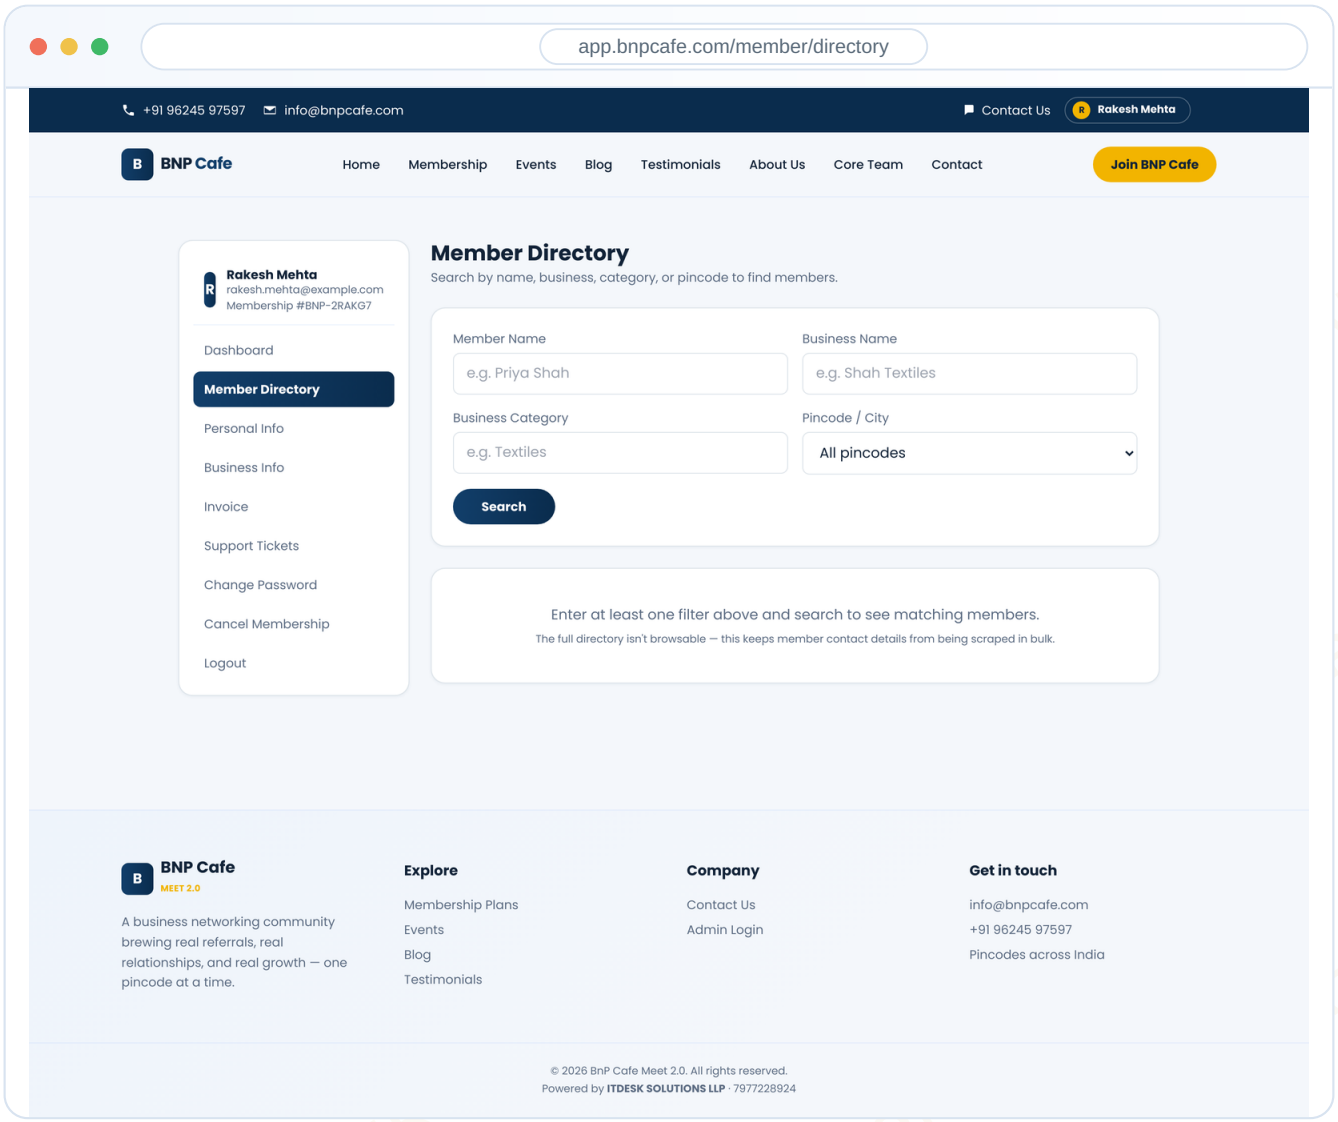

Member — Dashboard, showing an active plan and unlocked Member Directory.

5.2 Member Directory

A privileged search tool available only to members with an **active, paid** membership (shown with a small lock icon for anyone whose membership is not currently active). Members can search fellow members by name, business name, business category, or city to find the right person for a referral or collaboration. To protect the community's

contact data from being harvested in bulk, each search returns a limited, randomised set of matching results rather than an exhaustive list.

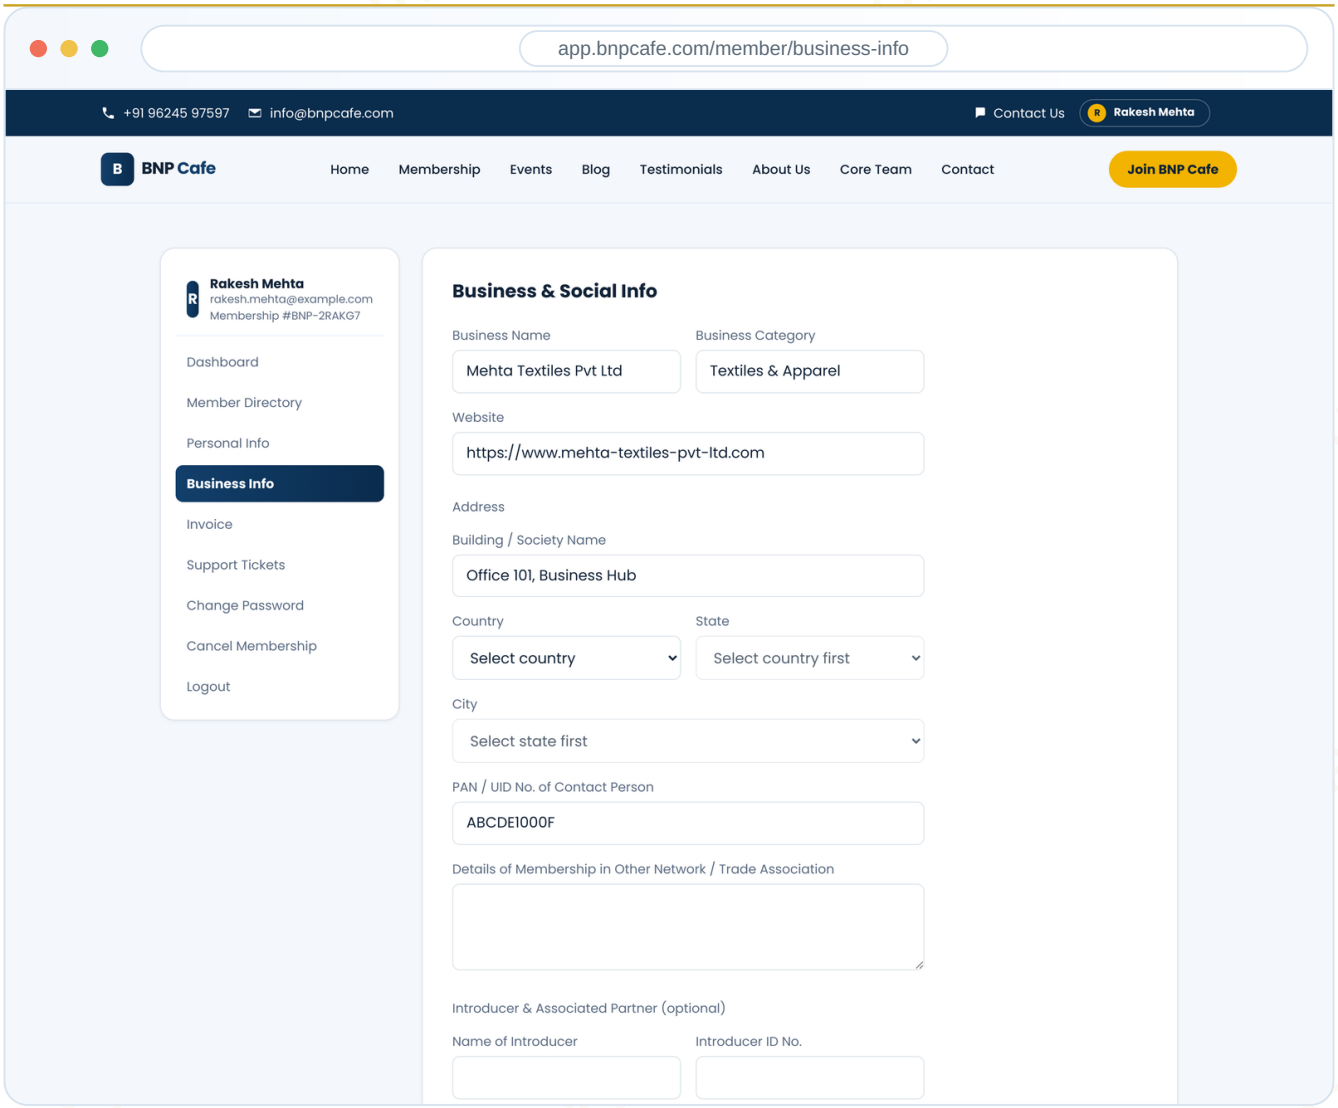

Member — Member Directory, unlocked for an active member.

5.3 Personal Info

Where a member keeps their core account details up to date — name, email address, phone number, occupation, and their chapter (city).

5.4 Business Info

A dedicated screen for everything related to a member's business identity and professional network presence: business name and category, website, complete business address, PAN/UID number, membership in other networking organisations, introducer and business-partner details from their onboarding, and their social media profile links (Facebook, Instagram, LinkedIn).

Member — Business Info.

5.5 Invoice

A running history of the member's own membership payments, showing each invoice against the plan it relates to — giving members a self-service record of their billing history without needing to contact support.

5.6 Support Tickets

Members can raise a new support ticket (with a subject, message and priority level), track all their tickets, reply within an open conversation, and close a ticket once resolved. To keep the support queue manageable, there is a limit on how many tickets a member can have open at the same time (configured by the Super Admin) — once that limit is reached, they are asked to resolve or close an existing ticket before opening another.

5.7 Change Password

A standard, secure self-service option to update the account's login password at any time, requiring the current password for verification.

5.8 Cancel Membership

Allows a member to voluntarily cancel their own membership from within their dashboard. Once cancelled, their status updates accordingly and privileged features such as the Member Directory are no longer accessible until a new membership is taken.

PRIVATE CIRCULATION ONLY

6 Guest Dashboard

6.1 Who is a Guest?

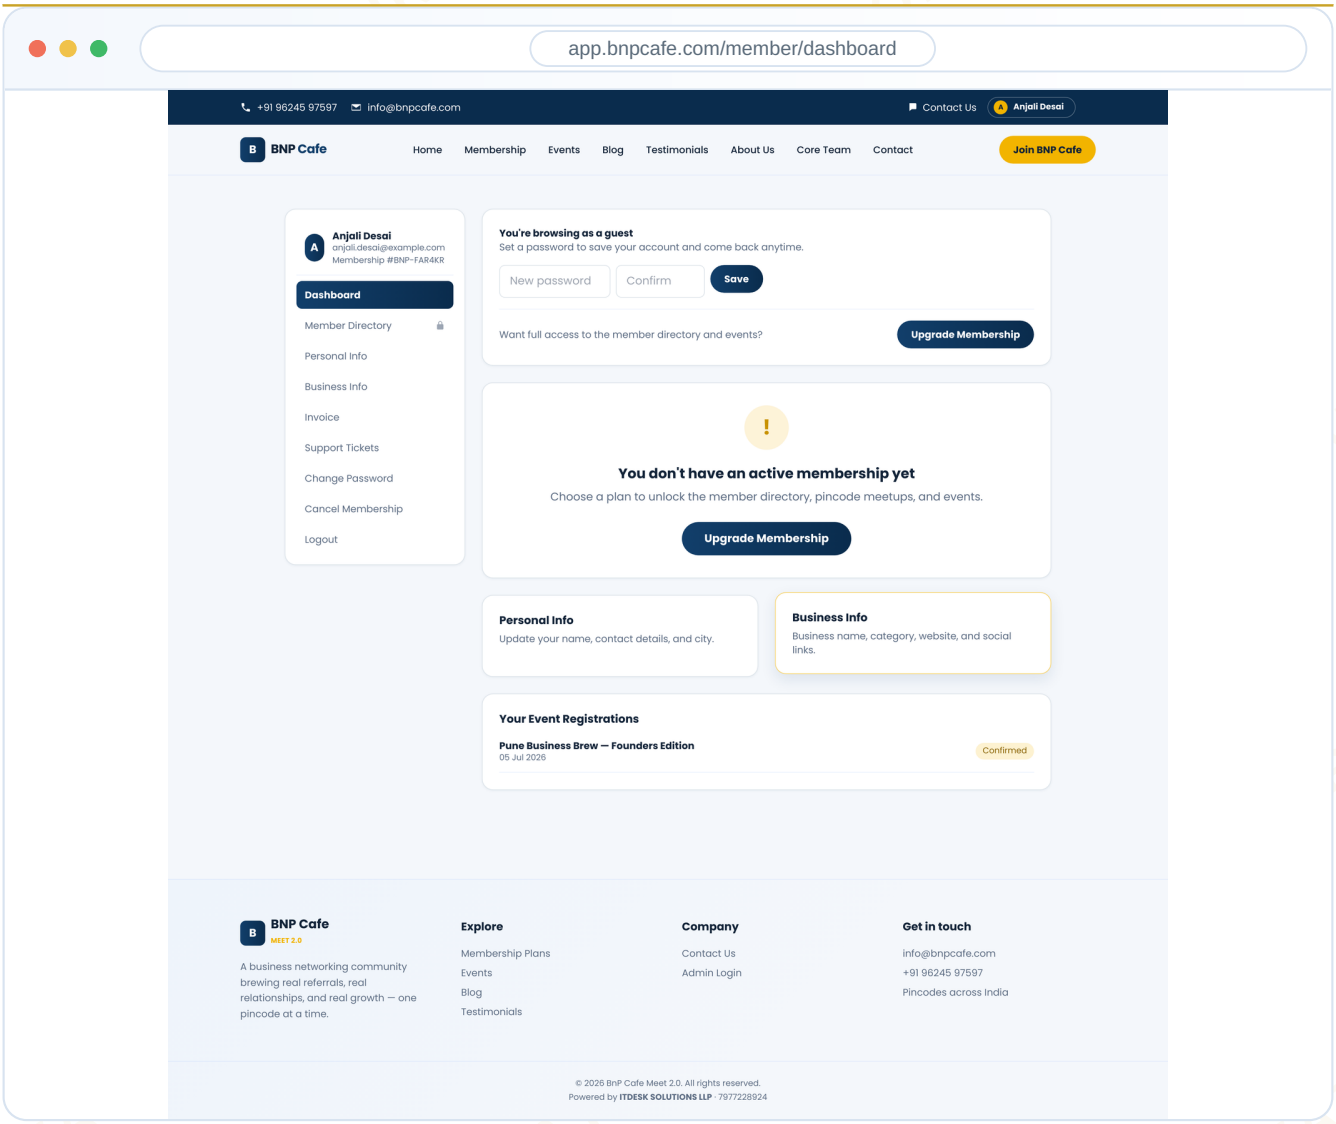

A Guest is anyone the platform has identified by email address **or phone number** after they either **registered for an event** or **submitted a contact enquiry** on the public website — without purchasing a membership plan. Rather than forcing them through a separate sign-up process, the platform automatically opens a personal dashboard for them and signs them in immediately, so they can track what they registered for right away, even before they have set a password.

Matching on phone number as well as email means the same person is recognised even if they use a different email address the next time they register or enquire — so they get one continuous guest record instead of a scattering of duplicates.

6.2 Guest Dashboard Options

A Guest sees the same style of dashboard as a Member, built around the same sidebar, with one key difference — privileged, members-only features are locked until they upgrade:

- **Dashboard** — an overview of their own activity, including the events they have registered for.
- **Personal Info** — update their name, email, phone, occupation and city at any time.
- **Business Info** — optionally add their business details and social links, exactly as a full member would, so their profile is ready the moment they upgrade.
- **Invoice** — shows any payments made (for example, for a paid event); this stays empty until the guest makes their first purchase.
- **Support Tickets** — guests can raise and manage support tickets exactly like a member, subject to the same open-ticket limit.
- **Set Password** — because a guest reaches their dashboard automatically (without ever choosing a password), they are offered a one-time "Set Password" option so they can securely return and sign in again later. Once a password exists, this becomes the standard "Change Password" option.
- **Member Directory** — visible in the menu but shown locked (padlock icon), since referral-directory search is reserved for active, paying members.

Guest — Dashboard, showing the "Set Password" prompt, the locked Member Directory, and the "Upgrade Membership" call to action.

> ⓘ **Why guests are tracked this way:** Recognising the same person across every touchpoint — an enquiry today, an event registration next month — means the organisation never loses track of a prospective member, and the guest never has to start over or create a duplicate account.

6.3 Becoming a Full Member

A Guest becomes a full Member in one of two ways:

1. **They purchase a membership plan themselves** — selecting a plan, completing the membership application form, and paying online automatically upgrades their account to full membership.
2. **An admin promotes them manually** — a Super Admin can convert a guest record into a full member directly from the Members screen, then assign a plan, status and password on their behalf.

7 Key Workflows

The sections above describe each dashboard option individually. This section walks through how those options come together in the platform's three most important end-to-end journeys.

7.1 Membership Application & Payment Journey

1. A prospective member browses the **Membership** page on the public website and selects a plan.
2. If not already signed in, they are asked to sign in or create an account — their chosen plan is remembered and resumed automatically once they do.
3. They complete the **membership application form** — address, PAN/UID, any other network memberships, optional introducer/partner details, and acceptance of terms. This step only needs to be completed once.
4. They are taken to **secure online payment** through one of the configured payment gateways.
5. On successful payment, their membership status becomes **Active** and full member features — including the Member Directory — unlock immediately.

7.2 Event Registration & Feedback Journey

1. A visitor (member, guest, or first-time visitor) opens an event on the public **Events** page and chooses to join.
2. They fill in their name, email and phone. A logged-in member registers under their own account; anyone else is automatically recognised or created as a **Guest** and signed in.
3. Free events confirm the registration immediately; paid events continue to a secure **payment** step first.
4. On the day of the event, the admin team marks attendance for each registrant (individually, or all at once).
5. After the event, attendees can submit **feedback** — including suggestions and referral references — which the admin team can review against each registration.

7.3 Support Ticket Lifecycle

1. A Member or Guest raises a ticket from their dashboard with a subject, message and priority.
2. The ticket appears to the relevant admin — the Super Admin sees everything; a Sub Admin sees only tickets from their own chapter.
3. The admin replies and updates the status to **Open**, **Answered**, or **Closed**. If the issue needs head-office attention, a Sub Admin can additionally **raise it as an Admin Ticket** directly to the Super Admin.
4. The member or guest can reply again (re-opening the conversation) or close the ticket themselves once satisfied.
